

HYDROMICRODERMABRASION SHOULD BE YOUR NEXT FACIAL!

Hydromicrodermabrasion is a crystal free method to the microdermabrasion process. It is the latest renovation in skincare technology. Utilizing water jets, the outer layer of the skin will be broken up. This will reveal a smoother, more even texture of the skin. It is perfect for those that want to exfoliate the skin but have extremely sensitive skin. This procedure is gentle and very relaxing, with no discomfort felt. Skin will be slightly pink after treatment, but will subside quickly thereafter.

WHY DO I NEED HYDROMICRODERMABRASION

Hydromicrodermabrasion is used on all skin types, and will help aging skin, skin that is congested, blemished skin, or dull and discolored skin. Oily skin can benefit to make it less greasy, and pores can be shrunk. Mild acne scars can be reduced, and fine lines can be decreased. Puffy eyes have also been treated using hydromicrodermabrasion. There will also be an increase in circulation and lymph flow. Skin will see results immediately after the procedure. Skin will be soft and feel hydrated. The process of hydro microdermabrasion takes about half an hour to do. The water that is used can be either distilled, saline or water that has been infused with minerals and vitamins.

Hydromicrodermabrasion uses a diamond tipped wand to gently exfoliate the skin. This tip will suction the skin in a gentle manner, which will remove the dead skin cells. Water will be delivered to the skin with the supersonic nozzle that is attached to the microdermabrasion machine. Then the wand will infuse the skin with a serum that was made to fully hydrate the skin.
